Appendix B: BBRKC Stock Assessment Input Files & Size-Frequency Residual Plots

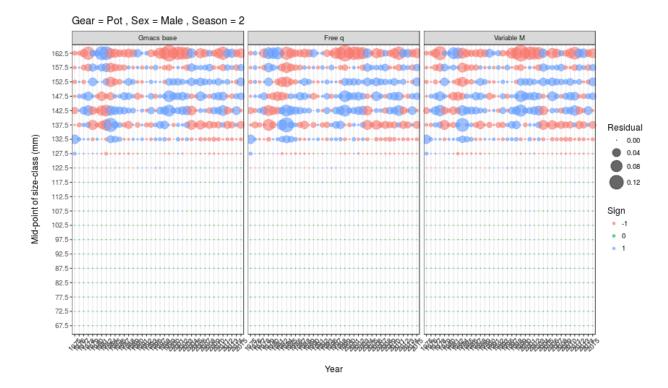

Figure 1: Size-frequency residuals of male BBRKC by year retained in the directed pot fishery for the 2017 model and each of the Gmacs model scenarios.

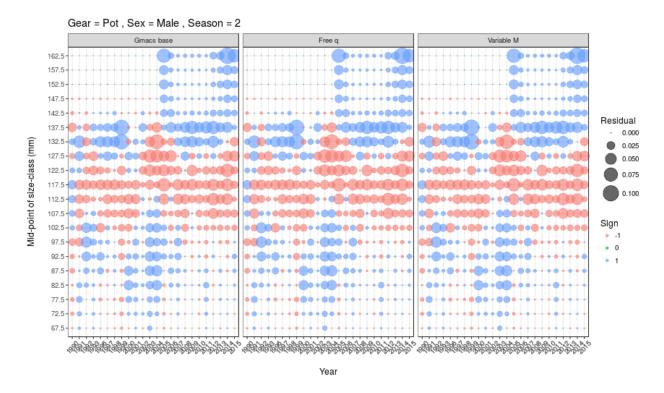

Figure 2: Size-frequency residuals of discarded male BBRKC by year in the directed pot fishery for the 2017 model and each of the Gmacs model scenarios.

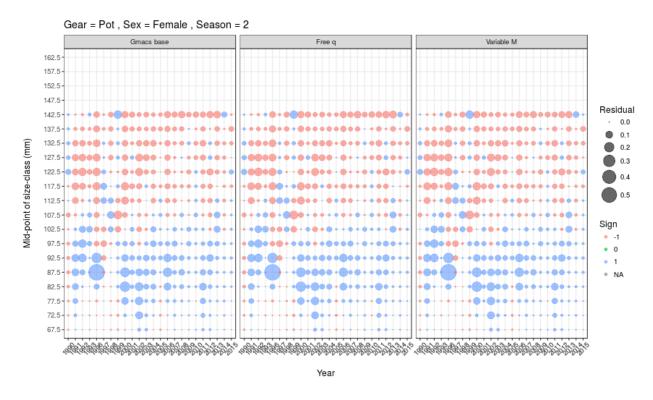

Figure 3: Size-frequency residuals of discarded female BBRKC by year in the directed pot fishery for the 2017 model and each of the Gmacs model scenarios.

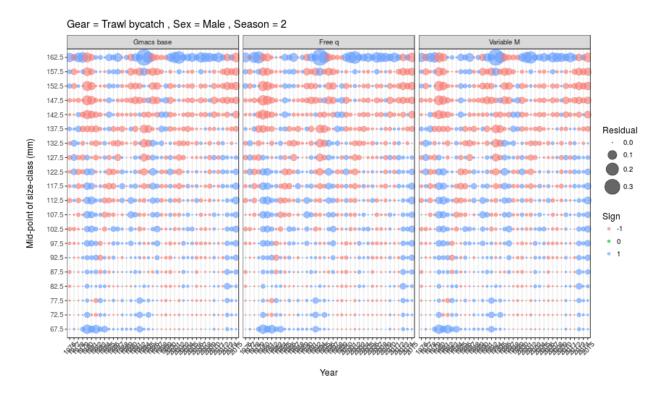

Figure 4: Size-frequency residuals discarded male BBRKC by year in the trawl by catch fishery for the 2017 model and each of the Gmacs model scenarios.

Figure 5: Size-frequency residuals of discarded female BBRKC by year in the trawl by catch fishery for the 2017 model and each of the Gmacs model scenarios.

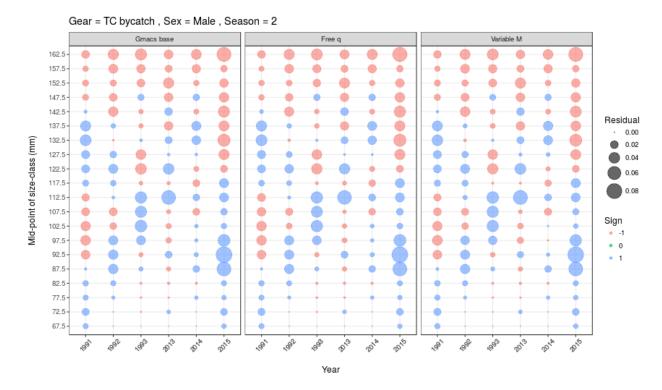

Figure 6: Size-frequency residuals of discarded male BBRKC by year in the tanner crab by catch fishery for the 2017 model and each of the Gmacs model scenarios.

Figure 7: Size-frequency residuals of discarded female BBRKC by year in the tanner crab by catch fishery for the 2017 model and each of the Gmacs model scenarios.

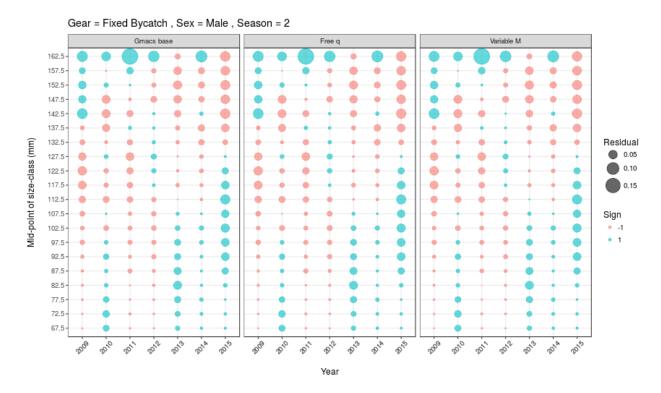

Figure 8: Size-frequency residuals of discarded male BBRKC by year in the fixed bycatch fishery for the 2017 model and each of the Gmacs model scenarios.

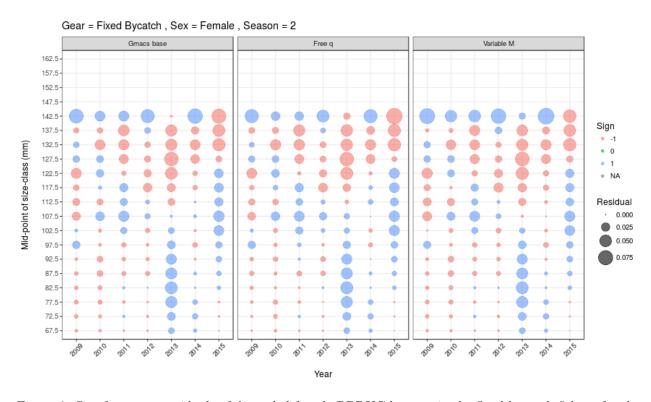

Figure 9: Size-frequency residuals of discarded female BBRKC by year in the fixed by catch fishery for the 2017 model and each of the Gmacs model scenarios.

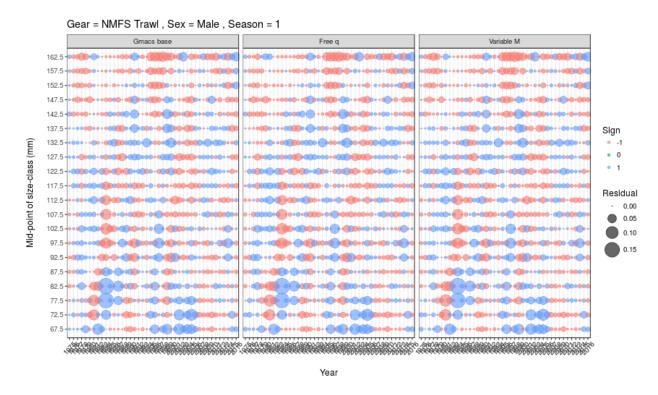

Figure 10: Size-frequency residuals of discarded male BBRKC by year in the NMFS trawl survey for the 2017 model and each of the Gmacs model scenarios.

Figure 11: Size-frequency residuals of discarded female BBRKC by year in the NMFS trawl survey for the 2017 model and each of the Gmacs model scenarios.

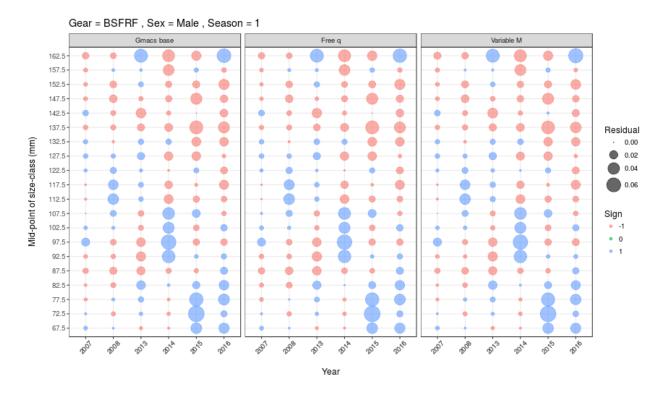

Figure 12: Size-frequency residuals of discarded male BBRKC by year in the BSFRF survey for the 2017 model and each of the Gmacs model scenarios.

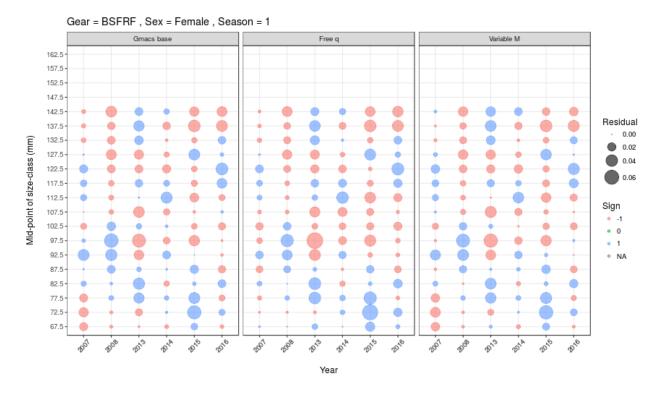

Figure 13: Size-frequency residuals of discarded female BBRKC by year in the BSFRF survey for the 2017 model and each of the Gmacs model scenarios.

## ## SELECTIVITY CONTROLS
            Selectivity P(capture of all sizes). Each gear must have a selectivity and a retention selectivity. If a uniform prior is selected for a parameter then the lb and ub are used (p1 and p2 are ignored)
## ## I.EGEND
          sel type: 0 = parametric, 1 = coefficients (NIY), 2 = logistic, 3 = logistic95, 4 = double normal (NIY)
            gear index: use +ve for selectivity, -ve for retention
## ##
## ##
            sex dep: 0 for sex-independent, 1 for sex-dependent
